FAST e FAST DRY

FAST: tightly woven fabric to avoid membranes

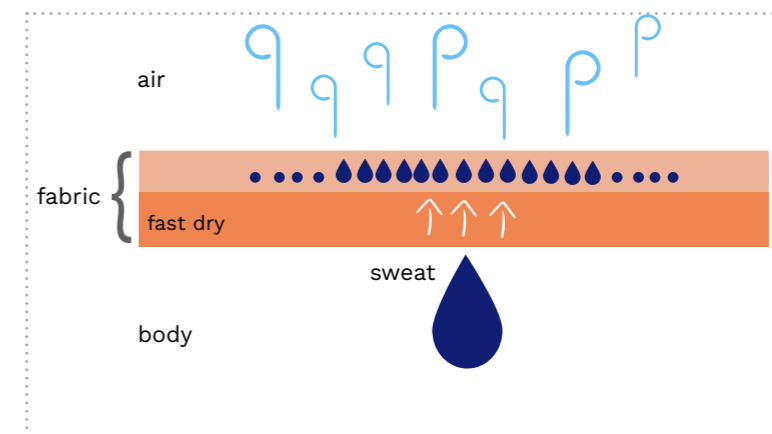

A new fabric with high technical performances: extremely breathable, quick evaporation (RET 0-6), fast moisture dispersion leaving your skin dry. High yarn density, blocking the air penetration. Air permeability is very low and ensures protection from cold air and wind during sport activities.

DRY

FAST DRY: double faced weave fabrics always dry

FAST DRY is the the ability to move the moisture from the inside to the outside surface. Allowing the inside fabric to fast dry and keeping it dry.

Boselli presents a new selection of fabrics named FAST and FAST DRY: FAST is a tightly woven fabrics to avoid the use of membranes. FAST DRY is a double face weave with the characteristic of be always dry.

Boselli's FAST items are the result of our company's verticalization. The polyester yarns are engineered with specific porosity and are conceived at Boselli's twisting and warping facilities in Tresenda and are subsequently woven, dyed and finished with specific treatments.
